

Subject: Communication on the Product List regarding Phase II of the RecycFluo Program

Dear Madam, Dear Sir,

Please note that the RecycFluo program will expand into Phase II of the [Regulation](#) on July 14, 2013 to cover mercury-containing lamps that are sold as components.

Recycling fees will be applied on a per-unit basis to component mercury-containing lamps integrated into all types of lighting fixtures and automobiles, effective October 1, 2013. Please find the [product and fee list](#) for these products.

Effective October 1, 2013, members are required to report fees on the sale of each component mercury-containing lamp integrated into lighting fixtures and automobiles. For example, a member selling a street lighting fixture containing one HID lamp will be required to report and remit to the program one HID fee on the sale of that fixture. A member selling an automobile with two integrated HID headlamps would pay two HID fees on the sale of that automobile. The ecofee rates for component mercury-containing lamps are the same as the ecofee rates applied to replaceable mercury-containing lamps sold individually. Component mercury-containing lamps integrated into lighting fixtures/automobiles and replaceable mercury-containing lamps sold individually are not required to be distinguished from each other on PCA's online fee reporting system. As an example, if a member sold 300 HID lamps as replaceable/individual lamps in a reporting period and 100 fixtures with a single integrated HID lamp into each in that same reporting period, the member would report 400 HID lamps for that reporting period (Category 5).

The [product and fee list](#) provides examples of lighting fixture types that can be sold with integrated mercury-containing lamps. Members that sell these types of lighting fixtures are encouraged to review their applicable SKUs to identify those that contain mercury-containing lamps for reporting purposes. It is expected that the majority of mercury-containing lamps sold integrated into lighting fixtures will be captured by these types of lighting fixtures. Regardless, it is each member's responsibility to review their lighting fixture SKUs and report on the sale of integrated mercury-containing lamps in all fixture types, not just those listed in the product and fee list. Members are encouraged to contact the RecycFluo program if they identify an additional lighting fixture type sold with an integrated mercury-containing lamp so it can be added to the example product list.

Ecofees will apply to mercury-containing lamps integrated into all kinds of fixtures and cars starting October 1, 2013.

For more information about the RecycFluo Program, or to notify the program of additional products not yet listed, please contact Louis Duvivier at louis@productcare.org or visit www.recycfluo.ca.

Sincerely,
